

Biomimetics: Nature-Based Innovation

CRC Press / Taylor & Francis Group

Editor: Yoseph Bar-Cohen, JPL, Pasadena

Outline

Chapter 1: Introduction: Nature as a source for inspiration of innovation - Y. Bar-Cohen, JPL

1.1	Introduction
1.2	Independent human innovation or bio-inspiration
1.2.1	The need to feed our babies - inspiring model for bottles design.....
1.2.2	Spider Web and the possibly inspired human made inventions
1.2.3	Furniture and many animals have 4-legs – is it a coincidence?
1.2.4	Flower opening from bud - model for folding and efficient packaging
1.2.5	Digging capabilities in nature and drilling tools
1.2.6	The honeycomb shape - inspiring model for light weight strong structures
1.2.7	Thorns, spines, and prickles – possibly inspired the barbwires.....
1.2.8	The beak and the human fingers - inspiring model for the pair of tongs.....
1.2.9	Animals' fur as an inspiring model for brushes
1.3	Biologically inspired technologies and mechanisms.....
1.3.1	Artificial Intelligence (AI).....
1.3.2	Artificial and biomimetic materials.....
1.3.3	Bio-Sensors
1.3.4	Vision and colors.....
1.3.5	Artificial muscles
1.3.6	Inchworm motors
1.3.7	Pumping mechanisms.....
1.3.8	Ground penetration using a gopher
1.4	Robotics as beneficiary of biomimetic technologies.....
1.5	Nature as a source of innovation for operation in water
1.6	Birds and insects as the source of inspiring flight.....
1.6.1	Birdman flying sport
1.6.2	A birdlike flying device with flapping wings.....
1.6.3	A fish-like blimp propelled by wagging its body and tail
1.6.4	Morphing Aircraft Wings
1.6.5	Anti-G fluid pressurized pilot suit inspired by the dragonfly.....
1.6.6	Soft landing inspired by seed dispersal
1.6.7	The tumbleweed as a model for planetary rover
1.7	Summary – the challenges and potential development
1.8	Acknowledgement.....
1.9	References
1.9	Internet websites.....

Chapter 2: Artificial Senses & Organs - Natural Mechanisms & Biomimetic Devices - Morgana Trexler and Ryan Deacon, Johns Hopkins University

2.1	Senses and Sensors.....
2.1.1	Introduction
2.1.2	Chemical Sensors
2.1.2.1	<i>Electronic Nose</i>
2.1.2.2	<i>Electronic Tongue</i>
2.1.3	Auditory and Acoustic Sensors

2.1.3.1	<i>Biomimetic Echolocation</i>
2.1.3.2	<i>Biomimetic Auditory and Acoustic Sensors</i>
2.1.4	Mechanical Sensors.....
2.1.4.1	<i>Biomimetic Gyroscope</i>
2.1.4.2	<i>Biomimetic Length and Velocity Sensors</i>
2.1.4.3	<i>Biomimetic Tactile Sensors</i>
2.1.4.4	<i>Biomimetic Flow Sensors</i>
2.1.5	Thermal Sensors.....
2.1.5.1	<i>Biomimetic Thermal Sensing and Imagery</i>
2.1.5.2	<i>Biomimetic Thermal Anemometer</i>
2.1.6	Electric Sensors
2.1.6.1	<i>Biomimetic Electroreception</i>
2.1.6.2	<i>Biomimetic Visual Tracking and Recognition</i>
2.1.8	Biological Inspiration for Potential Biomimetic Sensors
2.1.9	Future Prospects for Biomimetic Sensors
2.2	Artificial Organs.....
2.2.1	Introduction
2.2.2	Artificial Heart
2.2.2.1	<i>Replacement Heart Valves</i>
2.2.2.2	<i>Ventricular Assist Devices</i>
2.2.2.3	<i>Complete Heart Replacement Technologies</i>
2.2.3	Artificial Lung
2.2.4	Artificial Kidney.....
2.2.5	Artificial Pancreas
2.2.6	Artificial Liver.....
2.2.7	Artificial Blood.....
2.2.8	Artificial Skin
2.2.9	Miscellaneous Issues for Artificial Organ Technology
2.2.10	Future Prospects for Artificial Organs
2.3	References
2.4	Websites

Chapter 3: Bio-mimicry at the Cell-Materials Interface - Kelsey A. Potter, Bo Gui, and Jeffrey R. Capadona, Case Western Reserve University

3.1	Introduction
3.2	Background
3.2.1	Fundamentals of Cell and Matrix Biology
3.2.1.1	<i>Cellular Structure and Physiology</i>
3.2.1.2	<i>Cell Adhesion Molecules</i>
3.2.1.3	<i>The Extracellular Matrix (ECM)</i>
3.2.2	Tissue Reaction to Biomedical Materials/Devices.....
3.2.2.1	<i>Inflammatory and Immune Responses to Implanted Materials</i>
3.2.2.2	<i>Inflammatory Responses within the Central Nervous System</i>
3.3	Biomimetic Materials Design
3.3.1	Bioactive Materials Design: Cell and ECM Mimetic Materials.....
3.3.1.1	<i>Materials That Facilitate Controlled Protein-Material Interactions</i>
3.3.1.2	<i>ECM Mimetic Materials</i>
3.3.2	Application: Biomimetic Neural Interfaces.....
3.4	Conclusions
3.5	Acknowledgement.....
3.6	References

Chapter 4: Multiscale modeling of plant cell wall architecture and tissue mechanics for biomimetic applications - Alejandro Rey, Damiano Pasini, Yogesh Kumar, and Murugesan, McGill University, Canada

4.1	Introduction
4.2	Molecular Plant Cell Wall Biology
4.2.1	Architecture and function of multi-layered plant cell walls
4.2.2	Chemical composition of plant cell wall
4.2.2.1	<i>Cellulose</i>
4.2.2.2	<i>Hemicelluloses</i>
4.2.2.3	<i>The pectic substances</i> :
4.2.2.4	<i>Lignins</i>
4.2.3	Plant Cell wall nano-composite.....
4.2.4	Bio-inspired material and systems based on nanostructural organization of plant cell wall.....
4.2.4.1	<i>Nanofiber synthesis inspired by cellulose fibrillogenesis</i>
4.2.4.2	<i>Improving interfacial stability in ‘green’ composites</i>
4.2.4.3	<i>Actuation systems based on plant cell wall</i>
4.3	Material Science
4.3.1	Twisted plywood in plant cell wall
4.3.2	Helicoidal plywood paradigm
4.3.3	Classification of helicoidal plywoods
4.3.4	Modeling plywoods: LC directed self-assembly
4.3.5	Defects in plywoods: fingerprinting self-assembly
4.4	Biomimetic Applications
4.5	Structural mechanics
4.5.1	Histology: from cell to tissue
4.5.2	Fluid phase and solid phase in plant tissue.....
4.5.3	Modelling the mechanics of plant cellular solids
4.5.3.1	<i>The gaseous phase scenario: dry gas-filled cellular tissue</i>
4.5.3.2	<i>The liquid phase scenario: fully turgid thin-walled hydrostatic tissues</i>
4.5.3.3	<i>The hybrid scenario: thick-walled pressurized tissue</i>
4.5.4	Mechanical behaviour of selected tissues.....
4.5.4.1	<i>Parenchyma</i>
4.5.4.2	<i>Collenchyma</i>
4.5.4.3	<i>Epidermis</i>
4.5.4.4	<i>Vascular tissue system</i>
4.5.5	From tissue to composite shaped organ: the case of the leaf petiole.....
4.5.5.1	<i>The effect of tissue layering</i>
4.5.5.2	<i>The effect of organ cross-section geometry</i>
4.5.6	Biomimetic applications.....
4.6	Conclusion
4.7	Acknowledgements:
4.8	References

Chapter 5: Biomimetic composites - Daniel G. Strange and Michelle L. Oyen, University of Cambridge, UK

5.1	Introduction
5.2	Nacre
5.2.1	Introduction
5.2.2	Structure and Composition

5.2.3	Properties.....
5.2.3.1	<i>Elastic Properties</i>
5.2.3.2	<i>Strength</i>
5.2.3.3	<i>Toughness</i>
5.2.4	Biomimetic Synthesis Routes.....
5.2.4.1	<i>Macroscale modelling</i>
5.2.4.2	<i>Layer by Layer</i>
5.2.4.3	<i>Ice Templating</i>
5.2.5	Comparing nacre with eggshell and dental enamel
5.2.6	Summary
5.3	Bone
5.3.1	Structure and Composition.....
5.3.1.1	<i>Bone composition</i>
5.3.1.2	<i>Bone Ultrastructure</i>
5.3.1.3	<i>Bone Macrostructure</i>
5.3.2	Properties.....
5.3.2.1	<i>Elastic Properties</i>
5.3.2.2	<i>Failure Properties</i>
5.3.2.3	<i>Electrical Properties</i>
5.3.3	Biomimetic synthesis routes.....
5.3.3.1	<i>Bone Tissue Engineering</i>
5.3.3.2	<i>Cell-free Biomimetic Processing</i>
5.3.3.3	<i>Self-Healing</i>
5.4	Soft Tissues
5.4.1	Structure and Composition.....
5.4.1.1	<i>Proteins and Polysaccharides</i>
5.4.1.2	<i>Fibrous structure</i>
5.4.1.3	<i>Hierarchical structure</i>
5.4.2	Properties.....
5.4.2.1	<i>Nonlinear Elasticity</i>
5.4.2.2	<i>Anisotropy</i>
5.4.2.3	<i>Time Dependent Behavior and Hysteresis</i>
5.4.2.4	<i>Lubrication</i>
5.4.3	Biomimetic Synthesis Routes.....
5.5	Summary and outlook
5.6	References

Chapter 6: Electroactive polymer (EAP) actuators as artificial muscles - Y. Bar-Cohen, JPL

6.1	Introduction
6.2	The evolution of the development of EAP materials
6.3	The two EAP groups
6.3.1	Fabrication of EAP materials
6.3.2	Field-activated EAP
6.3.2.1	<i>Ferroelectric Polymers</i>
6.3.2.2	<i>Dielectric Elastomer EAP</i>
6.3.2.3	<i>Electrostrictive Elastomers</i>
6.3.3	Ionic EAP
6.3.3.1	<i>Ionomeric Polymer-Metal Composites (IPMC)</i>
6.3.3.2	<i>Conducting Polymers (CP)</i>
6.3.3.3	<i>Carbon Nanotubes (CNT)</i>
6.3.3.4	<i>Ionic Polymer Gels (IPG)</i>

6.3.4	Summary of the EAP groups.....
6.4	Current and potential applications.....
6.4.1	Dust wiper for the Nano-Rover and other space applications
6.4.2	Medical applications.....
6.4.3	Biomimetic robots
6.4.4	Full page refreshable braille displays.....
6.4.5	Toys and games
6.4.6	Dielectric Elastomer Switches (DES)
6.5	The armwrestling challenge – The capability indicator
6.6	Challenges, Trend and potential development
6.7	Acknowledgement.....
6.8	References
6.8.1	Internet References.....

Chapter 7: Refreshable Braille Displays (RBDs) Actuated by Electroactive Polymers (EAP) – Y. Bar-Cohen, JPL

7.1	Introduction - Historical Perspective of Braille
7.2	Commercial and non-EAP Actuated Refreshable RBDs
7.3	Refreshable Tactile Braille Display Using EAP
7.4	EAP based Refreshable Braille Displays
7.4.1	Ionic EAP
7.4.1.1	<i>Ionic polymer metal composite (IPMC)</i>
7.4.1.2	<i>Conducting Polymers</i>
7.4.2	Field-Activated EAP
7.4.2.1	<i>Roll-actuator made of terpolymer ferroelectric EAP</i>
7.4.2.2	<i>Dielectric Elastomer Actuator (DEA)</i>
7.4.2.2.1	Diaphragm-actuator
7.4.2.2.2	Diaphragm actuated by dielectric elastomer actuators
7.4.2.2.3	Multilayer structure of dielectric elastomer stack actuator
7.4.2.2.4	Piezoelectric polymer based on PVDF
7.4.3	Bistable Electroactive Polymer (BSEP)
7.4.4	Braille Printer using Refreshable Shape-Memory Polymer (SMP) paper.....
7.5	Conclusions
7.6	Acknowledgement.....
7.7	Reference.....
7.7.1	Websites

Chapter 8: Biological Optics – H. Donald Wolpert, Bio-optics, Los Angeles, CA

8.1	Introduction
8.2	Biological Optical Components
8.2.1	Biological Mirrors
8.2.1.1	<i>Composite Multi-Layer Reflectors</i>
8.2.1.2	<i>Chirped Multi-Layer Reflectors</i>
8.2.1.3	<i>Chaotic Reflectors</i>
8.2.2	Natures Optical Filters & Colors by Multi-Color Addition, Color Mixing, Birefringence, Bragg Scattering, Diffraction & Color Altering
8.2.2.1	<i>Reflective Interference Filters</i>
8.2.2.2	<i>Multi-Color Addition</i>
8.2.2.3	<i>Multi-Layer Additive Color Mixing</i>
8.2.2.4	<i>Color by Three Dimensional Photonic Helical Birefringent Structures</i>

8.2.2.5	<i>Color by One, Two or Three Dimensional Photonic Bragg Scattering</i>
8.2.2.6	<i>Color by Scattering</i>
8.2.2.7	<i>Iridescence by Diffraction</i>
8.2.2.8	<i>Color Altering</i>
8.2.3	Anti-Reflection Surfaces
8.2.4	Fiber Optics
8.3	Biological Optical Systems
8.3.1	Biological Lens Systems; Apposition and Superposition Compound Eyes
8.3.2	Gradient Index Optical Systems
8.3.3	Polarized Optical Systems
8.3.4	Color Vision
8.3.5	Scanning Optical Systems
8.3.6	All Reflective Optical Systems
8.3.7	Catadioptric Optical Systems
8.3.8	Aspheric Optical Systems
8.3.9	Refractive Optical Systems
8.3.10	Telephoto Optical Systems.....
8.3.11	Multiple Foveal Optical Systems
8.4	Sensor Fusing
8.5	The Future
8.6	Acknowledgements
8.7	References

Chapter 9: Biomimicry of the Ultimate Optical Device - The Plant - David W. Lee, Florida International University, Miami, FL

9.1	Plants are neglected bioinspirations
9.2	How plants are different.....
9.2.1	Energy efficiency and sessility
9.2.2	Plasticity and light
9.2.3	Plant tissue optics and light delivery
9.2.3.1	<i>Path-lengthening</i>
9.2.3.2	<i>Sieving/Packaging Effects</i>
9.3	Microstructures in plants.....
9.3.1	Surface effects.....
9.3.1.1	<i>Scatter and reduced absorption</i>
9.3.1.2	<i>Focusing and increased absorption</i>
9.3.1.3	<i>Absorption of diffuse radiation</i>
9.3.1.4	<i>Focusing and Color intensity</i>
9.3.1.5	<i>Cell Surface Structures</i>
9.3.1.6	<i>Surfaces and Water Droplets</i>
9.3.2	Internal effects
9.3.2.1	<i>Light-piping and penetration</i>
9.3.2.2	<i>Back-scatter and variegation</i>
9.4	Nano-structures in plants.....
9.4.1	Interference structures based on cellulose
9.4.1.1	<i>Leaves</i>
9.4.1.2	<i>Fruits</i>
9.4.2	Interference structures from thylakoid membranes
9.4.3	Silica particles and structural coloration in leaves
9.4.4	Plant Diffraction Gratings
9.5	The Functions of Structural Coloration in Plants

9.6	Prospects for biomimicry from plants.....
9.7	Acknowledgments.....
9.8	References.....
9.8.1	Internet links.....

Chapter 10: Biologically Inspired Design: A tool for interdisciplinary education - Jeannette Yen, Marc J. Weissburg, Michael Helms, and Ashok Goel, Georgia Institute of Technology

10.1	Introduction.....
10.2	Course overview
10.2.1	Course Components
10.2.2	Time line/Course flow.....
10.2.3	Evolution versus design
10.2.3.1	<i>Evolution as Designer: Pitfalls and Opportunities</i>
10.2.3.2	<i>Setting the Stage: Technological vs. Natural “Solutions”</i>
10.2.4	Analogy exercises
10.2.4.1	<i>Problem Decomposition</i>
10.2.4.2	<i>Compound Analogies in BID</i>
10.2.3.3	<i>Multifunctional Design and Problem-Driven vs. Solution-Based BID</i>
10.3	Studying the Biologically Inspired Design Process - Lessons Learned.
10.4	Future directions
10.5	Acknowledgements.....
10.6	References.....

Chapter 11: Self-reproducing machines and manufacturing processes - Adrian Bowyer, U. of Bath, UK

11.1	Introduction.....
11.2	A historical perspective.....
11.3	Scope, and some definitions of terms.....
11.4	Simulation and analysis.....
11.4.1	Cellular automata
11.4.2	Von Neumann reproduction
11.4.3	Moving from mathematics towards physics.....
11.5	Electro-mechanical self-reproduction
11.5.1	Self-assembling kinematic machines
11.5.2	Self-manufacturing kinematic machines
11.5.3	Self-assembling versus self-manufacturing kinematic machines
11.6	Physico-chemical self-assembly and reproduction
11.6.1	Meso-scale self-assembly.....
11.6.2	Synthetic biology.....
11.7	References.....

Chapter 12: Biomimetic products - Tom Masselter, Wilhelm Barthlott, Georg Bauer, Jürgen Bertling, Frank Cichy, Petra Ditsche-Kuru, Friederike Gallenmüller, Maik Gude, Tobias Haushahn, Michael Hermann, Henning Immink, Jan Knippers, Julian Lienhard, Rolf Luchsinger, Karin Lunz, Claus Mattheck, Markus Milwisch, Nils Mölders, Christoph Neinhuis, Anke Nellesen, Simon Poppinga, Marcus Rechberger, Simon Schleicher, Clemens Schmitt, Hannes Schwager, Robin Seidel, Olga Speck, Thomas Stegmaier, Iwiza Tesari, Marc Thielen and Thomas Speck

12.1	Introduction: How to develop biomimetic products – potential, challenge and process sequences.....
12.2	Self-X-Materials – a characteristic for biology and a challenge for techniques
12.2.1	Self-healing polymers.....
12.2.1.1	<i>Biomimetic approaches to self-healing polymers</i>
12.2.1.2	<i>Summary and outlook</i>
12.2.2	Self-repairing membranes
12.2.2.1	<i>Self-healing is not a privilege of nature</i>
12.2.2.2	<i>Biological template Dutchman's Pipe</i>
12.2.2.3	<i>Biomimetic self-healing coatings for pneumatic structures</i>
12.2.3	Self-adapting materials and structures.....
12.2.3.1	<i>Robot-grasp-system using the 'Finray Effect'</i>
12.2.3.2	<i>High-tech garment using the 'pine cone effect'</i>
12.2.4	Self-cleaning: the Lotus Effect [®]
12.2.4.1	<i>The phenomenon of self-cleaning</i>
12.2.4.2	<i>Fundamentals of self-cleaning plants</i>
12.2.4.3	<i>Technical realization</i>
12.2.5	Self-sharpening cutting tools.....
12.2.5.1	<i>The biological role model</i>
12.2.5.2	<i>The biomimetic approach</i>
12.2.6	The effect of non-genetic structure variation on tribological properties
12.3	Reversible and controllable biomimetic attachment systems
12.3.1	Attachment system with anisotropic attachment properties
12.3.2	Attachment system with controllable attachment properties.....
12.4	Packing and unpacking in nature – inspirations for biomimetic packaging.....
12.5	Biomimetic cable entry systems.....
12.6	Biomimetic impact and puncture resistant materials based on fruit walls and nut shells
12.6.1	Introduction
12.6.2	Hierarchical structuring of the biological role models
12.6.3	Technical implementations.....
12.7	Shock-absorbing transportation pallet.....
12.8	Biomimetic light-weight structures: 'Technical Plant Stem'
12.8.1	Bottom-up-process
12.8.2	Plant stems - the biological concept generators
12.8.3	The biomimetic product: 'Technical Plant Stem'
12.9	Branched fiber-reinforced composites
12.9.1	Introduction
12.9.2	Biological concept generators
12.9.3	Development of demonstrators and technical implementation
12.10.	Flectofin™ - a hingeless and versatile flap inspired by elastic plant movements.....
12.10.1	Introduction
12.10.2	Biological concept generators
12.10.3	Flectofin™ - a biomimetic product and a design process
12.11	FracTherm® - Fractal-like hydraulic channel structures
12.11.1	Fractal-like hydraulic channel structures in nature
12.11.2	The FracTherm® algorithm
12.11.3	Potential applications for energy-efficient heat-transfer
12.12	The failure of failure: optimized technical components inspired by design rules of nature
12.13	Acknowledgements.....
12.14	References.....
12.14.1	Internet links

Chapter 13: Biomimetics for medical implants – Bert Muller, Basel University Hospital, Switzerland

13.1	Structure of human tissue down to the nanometer scale: representative examples for hard and soft tissues.....
13.1.1	Hard tissues – bone and teeth.....
13.1.2	Soft tissues.....
13.2	Current medical implant technology
13.2.1	Materials used in dental medicine
13.2.2	Load-bearing implants.....
13.2.3	Artificial muscles: urinary sphincter
13.3	Towards biologically inspired medical implants.....
13.3.1	Dental posts
13.3.2	Fiber-reinforced load-bearing implants.....
13.3.3	Biologically inspired scaffolds.....
13.3.4	Artificial sphincters with bio-mimetic functionalities.....
13.4	The role of degradable implants in regenerative medicine
13.4.1	Root replica
13.4.2	Bone augmentation.....
13.4.3	Cartilage for the joints
13.5	Conclusion
13.6	Acknowledgement.....
13.7	References

Chapter 14: Application of biomimetics in the design of medical devices - Hande Argunsah
Department of Chemical and Biomedical Engineering, Cleveland State University and
Department of Biomedical Engineering, Lerner Research Institute, Cleveland Clinic; and Brian
L. Davis, Austen BioInnovation Institute in Akron

14.1	introduction
14.2	Anatomical design features that are puzzling.....
14.3	Inspirational design features
14.4	Biomimetics applications in medical device design.....
14.4.1	Biomimetic piezoelectric pump.....
14.4.2	Biomimetic coatings.....
14.4.3	Biological attachment devices.....
14.5	Attempts at recreating natural gait with artificial legs
14.5.1	Spring Mechanism mimicking muscles.....
14.6	Biomimicry applied to gait orthoses
14.6.1	Biomimetics Inspiration in Orthotics Technology
14.6.2	Biomimetics Inspiration used for exotendon orthoses
14.7	Summary
14.8	References

Chapter 15: Affective Robotics: Human Motion and Behavioural Inspiration for Safe
Cooperation between Humans and Humanoid Assistive Robots - A. G. Pipe, R. Vaidyanathan, C.
Melhuish, P. Bremner, P. Robinson, R. A. J. Clark, A. Lenz, K. Eder, N. Hawes, Z. Ghahramani,
M. Fraser, M. Mirmehdi, P. Healey, and S. Skachek

15.1	Introduction
15.2	Beyond understanding of human-human collaboration.....
15.4	Object location and identification.....

15.5	Shared attention
15.6	Recognition of body gestures, facial expressions and mental state
15.7	Generation of facial expressions and body gestures
15.8	Non-verbal utterances and verbal communication
15.9	Achieving robust interaction
15.10	Modelling & predicting the consequences of action
15.11	Reactive safety and new methods for safety design
15.12	The far future
15.13	Summary/Conclusions
15.14	Acknowledgement
15.15	References

Chapter 16: Humanlike robots - capabilities, potentials and challenges - Y. Bar-Cohen, JPL

16.1	Introduction
16.2	Historical Review
16.3	Potential applications and implications
16.4	Producing a humanlike robot
16.5	Humanlike robots and their benefits
16.6	Conclusions - Challenges, Trend and Potential Development
16.7	Acknowledgement
16.8	References
16.8.1	Internet websites

Chapter 17: Biomimetic swimmer inspired by the manta ray– Frank E. Fish, West Chester University of Pennsylvania; Alexander J. Smits, Department of Mechanical and Aerospace Engineering Princeton University Princeton, NJ; Hilary Bart-Smith, Department of Mechanical and Aerospace Engineering University of Virginia Charlottesville, VA

17.1	Introduction
17.2	Biology
17.2.1	Morphology
17.2.2	Steady swimming kinematics
17.2.3	Maneuvering
17.3	Hydrodynamics
17.4	Integrated structure and control
17.4.1	Tensegrity structures
17.4.2	Control
17.5	Prospectus
17.6	Acknowledgement
17.7	References

Chapter 18: Biomimetics and flying technology - Brenda Kulfan, The Boeing Company; and Anthony Colozza, Research Engineer at Analex Corporation / NASA Glenn Research Center, Cleveland, OH

18.1	Introduction
18.2	Nature of evolution
18.2.1	Evolution of the understanding of evolution
18.2.2	The process of evolution
18.2.3	Co-evolution Symbiotic Relations
18.2.3.1	<i>Mutualism</i>

18.2.3.2	<i>Predation</i>
18.2.3.3	<i>Competition</i>
18.3	Evolution of biological flight
18.3.1	Four convergent solutions
18.3.2	Probable steps in evolution of avian flight
18.3.3	System of system adaptations in the evolution of birds
18.3.4	Special noise reducing features of an owl
18.4	Achieving flight by man
18.4.1	Evolution of understanding
18.4.2	Biological inspiration
18.4.2.1	<i>Flapping wings</i>
18.4.2.2	<i>Aeroplanes</i>
18.4.2.3	<i>Innovation from seeds</i>
18.4.3	Chanute's 10 Critical Elements
18.4.4	Professor Langley's Aerodrome
18.4.5	The Wright Brothers – Achieving the Impossible Dream
18.5	Evolution of modern aircraft
18.5.1	Technical advancements on many fronts
18.5.2	Co-evolution in technical flight
18.5.2.1	<i>Commercial aircraft co-evolutionary mutualism</i>
18.5.2.2	<i>Commercial aircraft competition co-evolutionary developments</i>
18.5.2.3	<i>Military aircraft competition co-evolutionary development</i>
18.5.2.4	<i>Military aircraft predator / prey co-evolutionary development</i>
18.5.3	Contrasting biological and technical flight evolutionary drivers
18.6	Aircraft future technology needs and opportunities
18.6.1	Aircraft technology needs and development trends
18.6.1.1	<i>Aerodynamic efficiency technology development options</i>
18.6.1.2	<i>Propulsion system technology development trends</i>
18.6.2	Aircraft technology development options
18.7	Biomimetics in past, present and future aircraft
18.8	Impact of size on natures designs
18.8.1	Dimensional analysis and similarity for insight into nature
18.8.1.1	<i>What determines how small is small and how big is big?</i>
18.8.1.2	<i>How high can a flea jump?</i>
18.8.2	Physiological Mass Based Comparisons
18.8.2.1	<i>Size effects on natures flyers</i>
18.8.2	Elastic similarity
18.9	Size effects on airflow characteristics
18.10	Biological related approaches for technical innovation
18.10.1	Two approaches for biological research and technology application
18.11	Bionics – nature's concepts as inspiration for similar applications
18.11.1	Flying cucumber and flying wings
18.11.2	Albatross, gliders and the U2
18.11.3	Controlling the flight of birds and planes
18.11.4	The Inspiration for the helicopter: the dragonfly?
18.11.5	Bumblebees and the F-35 (JSF)
18.11.6	Hummingbirds and tilt wings
18.11.7	Spinning Seeds and Gyrocopters
18.11.8	Spiroid wing tips
18.11.9	Formation flight and ground effect
18.11.10	Variable wing sweep

18.12 Biomimicry – nature's concepts as inspiration for dissimilar applications.....
18.12.1 Classic example – Velcro and the burdock seed
18.12.2 Countercurrent Heat Exchanger
18.12.3 Concept vehicle Mercedes-Benz bionic car
18.12.4 Bionic propeller.....
18.12.5 Owl wings and jet noise
18.12.6 Fruit flies and folded wings.....
18.12.7 Nautilus and Jet engines
18.12.8 Bats, Echolocation, Sonar, Radar and Lidar AND Clear Air Turbulence.....
18.12.9 Shark's skin and riblets
18.13 Neo-Bionics - nature related computational processes for design innovations.....
18.13.1 Biological optimization techniques
18.13.2 Comparison of biological “optimization” techniques – traveling salesman problem
18.13.3 Genetic algorithm wing planform optimization
18.13.4 Genetic algorithm wing tip optimization.....
18.13.5 Evolutional structural optimization
18.14 Cybernetics - reverse engineering of nature for design innovations
18.14.1 Bird swarms and group dynamics
18.14.2 Distributed feet and mobile robots
18.14.3 Insects and optical flow
18.14.4 Natures passive flow control concepts
18.14.5 Grasshopper knees and jumping robots.....
18.15 Pseudo-Mimicry - innovations confirmed by nature designs and solutions.....
18.15.1 Microraptor gui and Tandem wings
18.15.2 Sea Gull and Parasol Wings
18.15.3 Wasps nests, damselfly wings, vulture bones and structural design concepts
18.15.4 Natures wheels and rotary tracks.....
18.15.5 Bacterial rotary engines and turbine engines.....
18.16 Biologically Inspired Aircraft Concepts
18.16.1 Insect Flight.....
18.16.1.1 <i>An Entomopter for Flight on Mars</i>
18.16.2 Bird, Mammal and Dinosaur Flight.....
18.16.2.1 <i>IPMC Based Wing Design</i>
18.16.2.2 <i>The Solid State Aircraft Concept</i>
18.16.2.3 <i>SSA Mission Capabilities</i>
18.16.2.4 <i>Application of the SSA to Planetary Exploration</i>
18.17 Ideas are everywhere.....
18.17.1 Motivations for inspiration
18.17.2 What do you see?
18.18 Parting Thoughts
18.18.1 Thoughts on ideas.....
18.18.2 Thoughts on action
18.19 Acknowledgments.....
18.20 References

Chapter 19: The Biomimetic Process in Artistic Creation – Adi Marom, Tisch ITP, New York University, NY, USA; and Gad Marom, The Hebrew University, Jerusalem, Israel

19.1 Principles of Biomimetic Engineering Combined with Art
19.2 Portraying Nature in Art: Artistic Representations of Nature
19.3 Art and Design in the Biomimetic Process
19.3.1 Artistic imitation of natural phenomena.....

19.3.2	Artistic abstractions of natural phenomena
19.4	Final Comments
19.5	Acknowledgement.....
19.6	References
19.6.1	Internet References.....

Chapter 20: Biomimetics - Reality, Challenges, and Outlook - Y. Bar-Cohen, JPL

20.1	Introduction
20.2	Biological capabilities and functions as models for mimicking.....
20.2.1	Materials.....
20.2.2	Sensing and sensors.....
20.2.2.1	<i>Vision</i>
20.2.3	Actuation.....
20.2.4	Pumping
20.2.5	Packaging
20.2.6	Defense and attack mechanisms and devices
20.2.7	Robotics.....
20.2.7.1	<i>Locomotion and mobility</i>
20.2.7.2	<i>Micro-robots</i>
20.2.7.3	<i>Sociability and other biological behaviors</i>
20.2.8	Swimming
20.2.9	Flying
20.2.10	Medical.....
20.2.10.1	<i>Surviving extreme conditions</i>
20.2.11	Novel toys
20.2.12	Architecture - buildings and construction
20.3	Biomimetics - potential revolution of technology.....
20.4	Acknowledgement.....
20.5	References
20.4.1	Internet links.....
